DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clifford (US4542640) in view of Petit (US5447705). Clifford teaches a gas sensor for monitoring and controlling combustion processes comprising a sensor material of a perovskite structure oxide which is screen printed on a substrate from metal oxides to form a sensor microstructure, where the sensor is contacted with the atmosphere and the resistance of the sensor is plotted to monitor and control combustion processes in response to the received signal. See columns 1-12. Clifford does not teach the claimed perovskite structure. Petit teaches a perovskite catalyst having the claimed structure, including the claimed range of composition, see columns 1-3. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the compositions taught by Petit in the invention taught by Clifford to act as the sensing catalyst, since Petit teaches these catalysts for use in hydrocarbon catalysis, which is the mechanism by which the invention of Clifford performs sensing. Any particular composition which is within the range boundaries taught by Petit would have been obvious to one having ordinary skill in the art, since determining the optimum value of a

result-effective variable is within the level of ordinary skill in the art. See *In re Boesch*, 617 F.2d 272 (CCPA 1960).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
